Notes & Details

Before assembling the table, please ensure all parts are included and in good condition. This table is designed for indoor use and should be placed on a flat, level surface to ensure stability. To maintain its corrosion resistance, clean the table regularly with mild soap and water, avoiding abrasive cleaners that may damage the surface. The galvanized undershelf is intended for lightweight to medium items—avoid overloading it to prevent damage. As this table is NSF certified for food safety, make sure to follow proper sanitation practices in food environments. For optimal performance and safety, double-check that all connections are securely assembled before use.
