IAD-SDT AUTOMATIC DIVIDER

Extractor Roll

Pre-Rounder

Front Control Panel

Pressure Hopper

An automatic divider is made for dividing a large volume of dough into consistently sized portions for production with virtually no human input or training required.

With piston sizes available in increments of 10mm from 60-150mm, the divider can be setup for dividing dough into quantities from 0.7oz to 58.2oz (20-1650g). There are four different hopper sizes and a pressure hopper for your dough capacity and hydration needs. The optional accessories allow the machine to be further customized for the needs of your specific application.

An automatic divider turns into the perfect dough ball making machine with the help of a Roundi. The dough is separated into equal portions, and the conveyor deposits it into the Roundi for perfect rounding.

FEATURES

- Painted Steel body with caster wheels
- Electronic speed regulation
- Conveyor belt with scraper
- Lubrication system with filter and sensors
- Manual or automatic weight regulation

Options

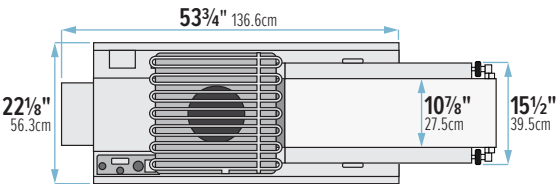

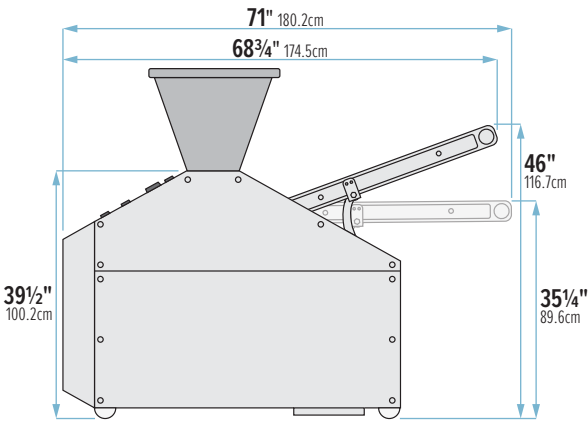

- Stainless Steel Body
- 8 different piston sizes
- 6 standard hoppers
- 4 Specialized hoppers
- Digital piece counter
- Digital touch screen
- Front end control panel
- Flour duster
- Supplementary lubrication system
- Remote start/stop controller

options may not be exactly as pictured
