Sensor/ Time Control

- With a sensor controlled machine the vacuum is measured with a sensor with very high accuracy and the results are digitally displayed
- With a time controlled vacuum machine a time is set and the vacuum level can be monitored with an analogue vacuum meter

Soft Air

The Soft Air program slowly brings the air pressure in the machine back to atmospheric level. This allows the plastic to wrap and stretch around sharp edges of the product which might otherwise puncture the plastic bag. Fragile products will keep in the right form when Soft Air is added.

Modified Atmospheric Packaging (M.A.P - Gas flush)

Some products cannot be packaged under vacuum but may better packaged by replacing the air by a mix of gases, like the Inert gas Nitrogen (N2), Carbondioxide (Co2) or Oxygen (O2) to increase shelf life and appearance.
